## Applying Policy with BGP

- Policy-based on AS path, community or the prefix
- Rejecting/accepting selected routes
- Set attributes to influence path selection
- Tools:
  - Prefix-list (filters prefixes)
  - Filter-list (filters ASes)
  - Route-maps and communities

## Policy Control – Prefix List

- Incremental configuration
- Applies Inbound or Outbound
- Based upon network numbers (using familiar IP address/mask format)
- Prefix-list ends with an implicit default deny
- Using access-lists in Cisco IOS for filtering prefixes was deprecated long ago
  - Strongly discouraged!

### Prefix Lists – Command Syntax

**•** Syntax:

[no] ip[v6] prefix-list list-name [seq value] permit|deny network/len [ge value] [le value] network/len: The prefix and its length ge value: "greater than or equal to" le value: "less than or equal to"

#### Both "ge" and "le" are optional

 Used to specify the range of the prefix length to be matched for prefixes that are more specific than network/len

#### Sequence number is also optional

no ip[v6] prefix-list sequence-number to disable display of sequence numbers

### Prefix Lists – Examples

- Deny default route in IPv4 ip prefix-list EG deny 0.0.0.0/0
- Deny default route in IPv6 ipv6 prefix-list EG-v6 deny ::/0
- Permit the prefix 35.0.0/8 ip prefix-list EG permit 35.0.0/8
- Permit the IPv6 prefix 2001:DB8::/32
  ipv6 prefix-list EG-v6 permit 2001:DB8::/32

### Prefix Lists – Examples

Deny the prefix 172.16.0.0/12

ip prefix-list EG deny 172.16.0.0/12

Deny the IPv6 prefix 3FFE::/16

ipv6 prefix-list EG-v6 deny 3FFE::/16

□ In 192/8 allow up to /24

ip prefix-list EG permit 192.0.0.0/8 le 24

- This allows all prefix sizes in the 192.0.0.0/8 address block, apart from /25, /26, /27, /28, /29, /30, /31 and /32.
- □ In 2000::/3 allow up to /48

```
ipv6 prefix-list EG-v6 permit 2000::/3 le 48
```

### Prefix Lists – Examples

□ In 192/8 deny /25 and above

ip prefix-list EG deny 192.0.0.0/8 ge 25

- This denies all prefix sizes /25, /26, /27, /28, /29, /30, /31 and /32 in the address block 192.0.0/8.
- It has the same effect as the previous example
- □ In 193/8 permit prefixes between /12 and /20

ip prefix-list EG permit 193.0.0.0/8 ge 12 le 20

This denies all prefix sizes /8, /9, /10, /11, /21, /22, ... and higher in the address block 193.0.0/8.

Permit all prefixes

ip prefix-list EG permit 0.0.0.0/0 le 32

 0.0.0.0 matches all possible addresses, "0 le 32" matches all possible prefix lengths

### Prefix Lists – Full Example

#### Example Configuration

```
router bgp 100
address-family ipv4
network 105.7.0.0 mask 255.255.0.0
neighbor 102.10.1.1 remote-as 110
neighbor 102.10.1.1 prefix-list AS110-IN in
neighbor 102.10.1.1 prefix-list AS110-OUT out
!
ip prefix-list AS110-IN deny 218.10.0.0/16
ip prefix-list AS110-IN permit 0.0.0.0/0 le 32
!
ip prefix-list AS110-OUT permit 105.7.0.0/16
ip prefix-list AS110-OUT deny 0.0.0/0 le 32
```

### Policy Control – Filter List

- Filter routes based on AS path
  - Inbound or Outbound
- Referenced in BGP neighbour configuration as:

neighbor <addr> filter-list <N> [in|out]

Referenced in main configuration as:

ip as-path access-list <N> [permit|deny] ...

The as-path access-list finishes with an implicit default deny

### Filter List – Example

• Example Configuration:

```
router bgp 100
address-family ipv4
network 105.7.0.0 mask 255.255.0.0
neighbor 102.10.1.1 filter-list 5 out
neighbor 102.10.1.1 filter-list 6 in
!
ip as-path access-list 5 permit ^200$
!
ip as-path access-list 6 permit ^150$
```

## Policy Control – Regular Expressions

#### Like Unix regular expressions

- Match one character
- \* Match any number of preceding expression
- + Match at least one of preceding expression
- Beginning of line
- \$ End of line
- \ Escape a regular expression character
- Beginning, end, white-space, brace
- Or
- () brackets to contain expression
- [] brackets to contain number ranges

## Policy Control – Regular Expressions

#### Simple Examples

match anything
match at least one character
match routes local to this AS
originated by AS1800
received from AS1800
via AS1800
via AS1800 and AS790
multiple AS1800 in sequence
(used to match AS-PATH prepends)
via AS65530 (confederations)

## Policy Control – Regular Expressions

Not so simple Examples

^[0-9]+\$ ^[0-9]+_[0-9]+\$	Match AS_PATH length of one Match AS_PATH length of two
^[0-9]*_[0-9]+\$	Match AS_PATH length of one or two
^[0-9]*_[0-9]*\$	Match AS_PATH length of one or two (will also match zero)
^[0-9]+_[0-9]+_[0-9]+\$	Match AS_PATH length of three
_(701 1800)_	Match anything which has gone through AS701 or AS1800
_1849(+_)12163\$	Match anything of origin AS12163 and passed through AS1849

## Policy Control – Route Maps

- A route-map is like a "programme" for IOS
- Has "line" numbers, like programmes
- Each line is a separate condition/action
- Concept is basically:

if *match* then do *expression* and exit

else

if *match* then do *expression* and exit else etc

Route-map "continue" lets ISPs apply multiple conditions and actions in one route-map

#### Lines can have multiple set statements

All set statements are implemented

```
route-map SAMPLE permit 10
set community 300:1
set local-preference 120
!
```

Lines can have multiple match statements

All conditions must match

```
route-map SAMPLE permit 10
match community 1
match ip address prefix-list MY-LIST
set local-preference 300
!
```

#### A match statement can have multiple commands

At least one command must match

```
route-map SAMPLE permit 10
match ip address prefix-list MY-LIST OTHER-LIST
set community 300:10
```

#### Route-map with only a match statement

Only prefixes matching go through, the rest are dropped

```
route-map SAMPLE permit 10
match ip address prefix-list MY-LIST
!
```

#### Line with only a set statement

- All prefixes are matched and set
- Any following lines are ignored

```
route-map SAMPLE permit 10
set local-preference 120
!
route-map SAMPLE permit 20
remark This line is ignored
set community 300:5
!
```

- Line with a match/set statement and no following lines
  - Only prefixes matching the condition are set, the rest are dropped

```
route-map SAMPLE permit 10
match ip address prefix-list MY-LIST
set local-preference 120
!
```

### Route Maps – Caveats

#### Example

 Omitting the third line below means that prefixes not matching list-one or list-two are dropped

```
route-map SAMPLE permit 10
match ip address prefix-list LIST-ONE
set local-preference 120
!
route-map SAMPLE permit 20
match ip address prefix-list LIST-TWO
set local-preference 80
!
route-map SAMPLE permit 30
remark Don't forget this
!
```

## Route Maps – Matching prefixes

#### Example Configuration:

```
router bgp 100
address-family ipv4
neighbor 1.1.1.1 route-map INFILTER in
!
route-map INFILTER permit 10
match ip address prefix-list HIGH-PREF
set local-preference 120
!
route-map INFILTER permit 20
match ip address prefix-list LOW-PREF
set local-preference 80
!
ip prefix-list HIGH-PREF permit 10.0.0.0/8
ip prefix-list LOW-PREF permit 20.0.0.0/8
```

## Route Maps – Matching prefixes

- **Commentary**:
  - If address matches HIGH-PREF set local-pref 120, and then exit
  - Otherwise if address matches LOW-PREF, set local-pref 80, and then exit
  - No other condition, so all other prefixes are dropped

### Route Maps – AS-PATH filtering

#### Example Configuration

```
router bgp 100
address-family ipv4
neighbor 102.10.1.2 remote-as 200
neighbor 102.10.1.2 route-map FILTER-ON-ASPATH in
!
route-map FILTER-ON-ASPATH permit 10
match as-path 1
set local-preference 80
!
route-map FILTER-ON-ASPATH permit 20
match as-path 2
set local-preference 200
!
ip as-path access-list 1 permit _150$
ip as-path access-list 2 permit _210_
```

## Route Maps – AS-PATH filtering

- **Commentary**:
  - If prefix originated from AS150, then set local-pref to 80, and exit
  - Otherwise if prefix transited AS210 (ie AS210 appears in the path), then set local-pref to 200, and exit
  - No other condition, so all other prefixes are dropped

### Route Maps – AS-PATH prepends

Example configuration of AS-PATH prepend

```
router bgp 100
address-family ipv4
network 105.7.0.0 mask 255.255.0.0
neighbor 102.10.1.2 remote-as 300
neighbor 102.10.1.2 route-map SETPATH out
!
route-map SETPATH permit 10
set as-path prepend 100 100
!
```

Use your own AS number when prepending

- Otherwise BGP loop detection may cause disconnects
- Deliberate insertion of other ASNs is called "AS PATH poisoning"

### Route Maps – Matching Communities

Example Configuration

```
router bgp 100
address-family ipv4
neighbor 102.10.1.2 remote-as 200
neighbor 102.10.1.2 route-map FILTER-ON-COMMUNITY in
!
route-map FILTER-ON-COMMUNITY permit 10
match community 1
set local-preference 50
!
route-map FILTER-ON-COMMUNITY permit 20
match community 2 exact-match
set local-preference 200
!
ip community-list 1 permit 150:3 200:5
ip community-list 2 permit 88:6
```

## Route Maps – Matching Communities

- **Commentary**:
  - If prefix belongs to communities 150:3 AND 200:5, then set local-pref to 50, and exit
  - Otherwise if prefix belongs to ONLY community 88:6, then set local-pref to 200, and exit
  - No other condition, so all other prefixes are dropped

## Community-List Processing

□ Note:

When multiple values are configured in the same community list statement, a logical AND condition is created. All community values must match to satisfy an AND condition

ip community-list 1 permit 150:3 200:5

When multiple values are configured in separate community list statements, a logical OR condition is created. The first list that matches a condition is processed

```
ip community-list 1 permit 150:3
ip community-list 1 permit 200:5
```

## Route Maps – Setting Communities

#### Example Configuration

```
router bgp 100
address-family ipv4
network 105.7.0.0 mask 255.255.0.0
neighbor 102.10.1.1 remote-as 200
neighbor 102.10.1.1 send-community
neighbor 102.10.1.1 route-map SET-COMMUNITY out
!
route-map SET-COMMUNITY permit 10
match ip address prefix-list NO-ANNOUNCE
set community no-export
!
route-map SET-COMMUNITY permit 20
match ip address prefix-list AGGREGATE
!
ip prefix-list NO-ANNOUNCE permit 105.7.0.0/16 ge 17
ip prefix-list AGGREGATE permit 105.7.0.0/16
```

### Route Map Continue

 Handling multiple conditions and actions in one route-map (for BGP neighbour relationships only)

```
route-map PEER-FILTER permit 10
match ip address prefix-list GROUP-ONE
continue 30
set metric 2000
!
route-map PEER-FILTER permit 20
match ip address prefix-list GROUP-TWO
set community no-export
!
route-map PEER-FILTER permit 30
match ip address prefix-list GROUP-THREE
set as-path prepend 100 100
!
```

## Order of processing BGP policy

- For policies applied to a specific BGP neighbour, the following sequence is applied:
  - For inbound updates, the order is:
    - 1. Route-map
    - 2. Filter-list
    - 3. Prefix-list
  - For outbound updates, the order is:
    - 1. Prefix-list
    - 2. Filter-list
    - 3. Route-map

## Managing Policy Changes

- New policies only apply to the updates going through the router AFTER the policy has been introduced or changed
- To facilitate policy changes on the entire BGP table the router handles the BGP peerings need to be "refreshed"
  - This is done by clearing the BGP session either in or out, for example:

clear ip bgp <neighbour-addr> in|out

Do NOT forget in or out — forgetting results in a hard reset of the BGP session

## Managing Policy Changes

Ability to clear the BGP sessions of groups of neighbours configured according to several criteria

#### □ clear ip bgp <addr> [in|out]

<addr> may be any of the following:

x.x.x.x	IP address of a peer
*	all peers
ASN	all peers in an AS
external	all external peers
peer-group <name></name>	all peers in a peer-group

# BGP Policy Control
